

## About Count Me In TT

Count Me In TT is a Trinidad and Tobago–built math game platform designed to make multiplication practice fast, competitive, and enjoyable. Players complete timed multiplication grids and track their improvement over time—building fluency, confidence, and focus through consistent practice.

Whether you're a primary school student, a secondary school student, or simply someone looking for a brain boost, Count Me In TT is open to everyone.

### How It Works

- Choose a grid level:  $5 \times 5$ ,  $5 \times 12$ ,  $12 \times 12$ , or  $15 \times 15$
- Complete the grid as quickly and accurately as possible
- Submit your time to appear on the leaderboard (where applicable)
- Track your progress, improve your speed, and compete with yourself and others

### Why It Matters

Mathematics is a foundation for academic and real-life success. Many students struggle not only with knowledge, but with speed and confidence under exam pressure. Count Me In TT supports strong performance by helping students:

- strengthen times-table recall and mental math speed
- build consistency and confidence through measurable improvement
- develop focus, pattern recognition, and accuracy under time pressure
- stay motivated through personal targets, class challenges, and leaderboards

## Built for Schools

Count Me In TT can be used in classrooms as a weekly fluency activity. Schools can run friendly competitions and use school/class leaderboards to motivate participation and track improvement.

## Creator

Count Me In TT was developed by Andre Burton, founder of A's Online Tutoring Services. After years of tutoring, Andre noticed a consistent gap: many students understand multiplication, but struggle to recall facts quickly under pressure. Count Me In TT was created to make practice more engaging, measurable, and fun—while staying accessible and free for students, parents, and teachers.

## Sponsorship and Media Inquiries

We welcome partnerships with schools, educators, businesses, and sponsors who want to support math development and student rewards. Opportunities include prize sponsorship, branded placements, and support for school rollouts and platform expansion.
